GBU Reflection

👍 Good

- Our team collaborated effectively using Git branches to separate and manage work.
- Successfully created and loaded data into the database.
- Designed a clear EER diagram and improved it with table color-coding for readability.
- Everyone contributed in a meaningful way and respected deadlines.

👎 Bad

- Forgot set field sizes (from VARCHAR 45 to 255).
- Some SQL queries took longer to debug than expected.

😬 Ugly

- My .DS_Store and binary file conflicts were frustrating and unnecessary.
- Last-minute changes to the schema made syncing between teammates more stressful.
- Audit fields were added late.

✨ Overall, the assignment helped us strengthen our teamwork and Git/GitHub skills while learning the importance of planning database design thoroughly before coding.
